### Differential Diagnosis In Obstetrics Gynaecology

The term unfolded aorta refers to the widened and 'opened up' appearance of the aortic arch on a frontal chest radiograph. It is one of the more common causes for apparent mediastinal widening and is seen with increasing age.. It occurs due to the discrepancy in the growth of the ascending aorta with age, where the length of the ascending aorta increases out of proportion with diameter ...

### Unfolded aorta | Radiology Reference Article | Radiopaedia.org

Placenta praevia is when the placenta attaches inside the uterus but in an abnormal position near or over the cervical opening. Symptoms include vaginal bleeding in the second half of pregnancy. The bleeding is bright red and tends not to be associated with pain. Complications may include placenta accreta, dangerously low blood pressure, or bleeding after delivery.
