## **Cross Stitch Patterns of the Seasons**

The seasons occur at opposite times in the hemispheres; when the Southern Hemisphere is tilted toward the Sun, the Northern Hemisphere has to be tilted away from the Sun. Antarctica, in the very bottom of the Southern Hemisphere, gets more sunlight and warmth, experiencing summer, when the North Pole is receiving less light and warmth and experiencing winter.

## **The Seasons Of Antarctica | Antarctica Journal**

You are probably familiar with the pattern of the seasons. For example, you know that the Fourth of July occurs in summer every year. Most places on Earth experience four seasons—winter, spring, summer, and fall (or autumn). The seasons always occur in this order.

## **Why the Night Sky Changes With the Seasons | Space**

At the same time, the Southern Hemisphere points away from the Sun, creating winter during the months of June, July and August. Summer in the Southern Hemisphere is in December, January, and February, when the South Pole is tilted toward the Sun and the Northern Hemisphere is tilted away.

## **What Causes Seasons on Earth? - Time and Date**

The Short Answer: Earth's tilted axis causes the seasons. Throughout the year, different parts of Earth receive the Sun's most direct rays. So, when the North Pole tilts toward the Sun, it's summer in the Northern Hemisphere. And when the South Pole tilts toward the Sun, it's winter in the Northern Hemisphere.
